

1. Refer to the *Solaris Handbook for SMCC Peripherals* or the *Solaris AnswerBook* online documentation for information on configuring your system for use.
2. Read the information in the *Sun StorEdge FlexiPack User's Guide*. Your hardware configuration determines the number and distribution of SCSI addresses available.

Caution – Chaining UltraSCSI hard disk units to a Sun StorEdge FlexiPack unit negates UltraSCSI performance.

3. Verify the total SCSI bus lengths for your system and all peripherals.
The total length of all external cables and internal bus lengths affects the SCSI bus speeds. See Appendix A of the *Sun StorEdge FlexiPack User's Guide*.
4. Shut down the operating system.
5. Determine which SCSI addresses are available on your system.
6. Change the addresses of other devices, if necessary.
7. Turn off the power to the workstation and the peripherals.
8. Connect the cables (ordered separately).
9. Turn on the power and configure the system.

Notes on Termination

The Sun StorEdge FlexiPack enclosure is self-terminating. Two LEDs on the back of the unit, in the lower right corner, indicate termination. These LEDs are for setup and troubleshooting only; ignore them during normal operation.

LED	Indication	Lights Under These Conditions
Hi	High-order SCSI bits are terminated.	The enclosure is followed by a narrow SCSI device or is the last device in a SCSI chain.
Lo	Low-order SCSI bits are terminated.	The enclosure is the last device in a SCSI chain.

Ordering Sun Documents

SunDocsSM is a distribution program for technical documentation and is available from SunExpressTM. You can find a full listing of available documentation on the World Wide Web:

<http://www.sun.com/sunexpress/>
