

## VERITAS NetBackup™ FastBackup 3.4 for Auspex

VERITAS NetBackup FastBackup extends the capabilities of NetBackup on Auspex platforms by combining the increased performance of online raw partition backups with the ability to do individual file restores. Your new VERITAS package contains a CD-ROM in addition to this card.

### CD-ROM Contents

The CD-ROM contains software for Auspex 1.9M NetServers.

### System Requirements

- The systems where you install this software must be Auspex 1.9M NetServers.
- Each NetServer must be running NetBackup 3.4 or later server software.

*Caution: If you are using a version of NetBackup earlier than 3.4, upgrade to 3.4 or later before installing FastBackup. Otherwise, FastBackup backups will work but restores of files greater than two gigabytes will fail.*

### Installation Procedure

1. Log in as root on each Auspex 1.9M NetServer where you are performing the install.
2. Make sure a valid license key for NetBackup FastBackup for Auspex has been registered by using the following command to list and add keys:

```
/usr/opensv/netbackup/bin/admincmd/get_license_key
```

3. Insert the CD-ROM containing the NetBackup FastBackup for Auspex software in the drive.
4. Change your working directory to the CD-ROM directory:

```
cd /cd_rom_directory
```

Where *cd\_rom\_directory* is the path to the directory where you can access the CD-ROM. On some platforms, it may be necessary to mount this directory.

5. To install NetBackup FastBackup for Auspex, execute the following:

```
./install
```

Since other NetBackup products are included on the CD-ROM, a menu appears.

- a. Select the NetBackup FastBackup for Auspex option.
  - b. Enter **q** to quit the menu.
  - c. When asked if the list is correct, answer **y**.
6. If the master server is not an Auspex 1.9M NetServer, the license key for NetBackup FastBackup for Auspex must be registered there. **(Over)**

Use the following command to add the key on the master server:

```
/usr/opensv/netbackup/bin/admincmd/get_license_key
```

7. After the software has been installed on the Auspex 1.9M NetServers, configure FastBackup on the master server as explained in the *NetBackup System Administrator's Guide - UNIX*. Before starting, read the "Overview of Auspex FastBackup Classes" topic in the "Reference Topics" appendix in that manual.
